

EduGenie – Documentation & Demo

7. Documentation & Demo

This document provides the documentation and demonstration outline for the EduGenie project. It can be used to organize the material required to explain the project clearly.

1. Project Overview

EduGenie is an AI-powered learning assistant built with FastAPI and Google Gemini. It is designed to support educational question answering, simple explanations, study-material summarization, quiz generation, and personalized learning paths.

2. Technology Summary

Technology	Role in the Project
Python	Core programming language.
FastAPI	Backend/web application framework.
Google Gemini API	AI-generated response service.
Jinja2	Template rendering.
HTML, CSS, JavaScript	User interface and client-side functionality.

3. Documentation Checklist

- Project title and overview
- Problem and purpose of the application
- Main features
- Technology stack
- Project design and planning documents
- Development details
- Testing information
- Screenshots or other project evidence where available

4. Demo Preparation

Before the demonstration, ensure that the application can be started, the main interface is accessible, and the required environment configuration is available. Keep the project workflow and key features ready to explain.

5. Suggested Demo Flow

Introduce EduGenie → explain the purpose → show the main interface → demonstrate an educational question → explain the generated response → show other implemented learning features where available → summarize the project.

6. Important Note

This document is a documentation and demo outline based on the available project information. Screenshots, measured results, or feature behavior should be added only from the actual project/demo evidence.
