

EduGenie – Project Demonstration

8. Project Demonstration

This document provides a structured demonstration flow for presenting the completed EduGenie project.

1. Demonstration Introduction

Begin by introducing EduGenie as an AI-powered learning assistant and briefly explain the purpose of the project.

2. Demonstration Flow

Step	What to Demonstrate
1	Open the EduGenie application and show the main interface.
2	Explain the main purpose and workflow of the application.
3	Enter an educational question and demonstrate the AI response.
4	Show the learning-related features that are implemented in the application.
5	Explain the technologies used in the project.
6	Show relevant project documentation, testing material, or screenshots when available.
7	Conclude by summarizing the project and its intended educational use.

3. Key Points to Explain

During the demonstration, explain the project's purpose, the user workflow, the role of the FastAPI backend, the Google Gemini API integration, and the learning features that are actually available in the implemented application.

4. Demonstration Checklist

- Application starts successfully
- Main interface is accessible
- AI question-and-response flow is ready
- Required environment configuration is available
- Project documentation is organized
- Screenshots or evidence are ready if required

5. Closing

Finish the demonstration by summarizing what EduGenie provides, the technologies used, and the main learning-support functionality demonstrated.

Note: Only features and results that are actually implemented or demonstrated should be presented as completed project functionality.
